

Flagged - Writeup

We start with a wav file that plays some morse code. By decoding the morse code we get pointed towards the Hacksoc domain

When we reach that URL, we get a video of some men with what appears to be flags, moving around very quickly.

Any kind of search for "dancing flag men cipher" should reveal that we're using the Dancing Men Cipher.

We have one more problem, the video flies by, so we need to use some kind of tool so we can view each image. There are plenty of websites that do it but specifically <https://frame-extractor.com> seemed to be quite a good option. Once we get how often to split the frames, we were able to decode that with each letter and find our flag!
